EDUCATION

Thapar Institute of Engineering and Technology, Patiala, Punjab

Bachelors of Engineering in Computer Engineering

Relevant Coursework: DBMS, OOP, Operating Systems, Computer Networks, Data Structures and Algorithms

09/2023 – 06/2026

CGPA 7.35 / 10

Thapar Polytechnic College, Patiala, Punjab

Technical Diploma in Electrical Engineering

Relevant Coursework: Digital Electronics, Control Systems, Network Analysis, Materials, Electrical Machines

08/2020 – 06/2023

81.5%/100

Sarvodaya Vidyalaya, Delhi

10th CBSE

2020

74%

SKILLS

Languages & Web:	JavaScript (ES6+), C/C++, Python, HTML5, CSS3, REST API, JSON, Data Visualization, Redux / Context API, React.js, Node.js, Express.js, Tailwind CSS, Git, Neo4j
Frameworks & DBs:	MERN Stack (MongoDB, Express.js, React.js, Node.js), MySQL, PostgreSQL, NoSQL (MongoDB), Mongoose, SQL
Tools:	VS Code, Postman, Git & GitHub, Linux, Power BI Desktop, npm, Vite, Netlify, Vercel, Google Earth Engine, Google Cloud Platform, PyCharm, AWS, Bitbucket Pipelines
Others:	SDLC, OOP, API Integration, Deployment, CI/CD, Innovative Execution, Data Analysis

EXPERIENCE

Scoreme Solutions Pvt. Ltd. — Software Developer

01/2026 – Present

Location: Gurugram

Building an AI-powered corporate-intelligence platform for banks and lending institutions — cutting the time to run a company's credit, forensic, and compliance checks from weeks to minutes.

- Architected an end-to-end **agentic AI reporting platform** (Flask + React) that ingests a company's CIN/PAN, pulls its regulatory footprint across 9 data sources — MCA, KYC, GST, legal, compliance, and sanction screening — and normalizes it into a single dataset consumed by every downstream report.
- Engineered **LLM-driven generation agents** (Claude + Gemini) for 25+ report types — Forensic Deep-Dive Audit, CMA, IPO Readiness, TEV, Bank Board Notes (24 bank formats), AML/Sanction Screening, and valuations — each pairing a structured prompt/parse "inference engine" with a dedicated DOCX/PPTX/XLSX generator.
- Developed **Vedant**, an AI copilot chat assistant grounded in a company's complete data footprint (every data source plus every uploaded document), with every answer citing its source — including a **multi-company selection mode** to chat across a group of related/associate companies in a single session.
- Delivered **TEV Studio** (a chapter-based TEV report generator with an in-place, chat-driven section-editing assistant) and a **Debt Syndication** prototype (document upload, automated MCA pull, compliance checklist, AI chat) — together cutting end-to-end report turnaround time from **~20 days to a few hours**.
- Designed a **reversible PII-masking pipeline** that masks PAN, DIN, GSTIN, Aadhaar, phone, and email before any data reaches an LLM and restores them via pattern-based reconstruction across all report types.
- Created a **document and Excel parser** that deterministically walks an uploaded workbook cell-by-cell, uses an LLM to infer its schema and structure, and persists the parsed content into a queryable SQLite store — turning an unstructured client financial model into structured, query-ready data.
- Optimized LLM cost and reliability** platform-wide: cut input token usage by ~35% (87k→60k tokens/request) by eliminating redundant payload duplication, resolved critical production API timeout errors, and added a deterministic safety-net layer catching shareholding conflicts and empty financial tables across report formats.
- Established the platform's async **Report API** — a ThreadPoolExecutor-based job queue with webhook callbacks, real-time status polling, and multi-format (DOCX/JSON) output for third-party integrations.
- Deployed and operate the platform on AWS** (EC2, gunicorn + nginx), and set up the **CI/CD pipeline** (Bitbucket Pipelines) that builds the React frontend and auto-deploys to production on every merge to main.

Schneider Electric Pvt. Ltd. — Industrial Training (PLC)

05/2022 – 07/2022

Location: Ludhiana

- Completed hands-on training on industrial automation and PLC programming using Schneider Electric tools, simulating 5+ real-world systems.
- Gained practical experience with ladder logic, SCADA integration, and Modicon PLC systems, improving troubleshooting speed by 35%.
- Designed and implemented 3+ automation projects using sensors, actuators, and relays, boosting testing accuracy by 25%.
- Ran 5+ simulation environments to test and debug industrial automation logic, reducing troubleshooting time by 40%.

PROJECTS

1. Atlas — Agentic Credit-Intelligence Platform | *Flask, React, Claude, Gemini, AWS*

- End-to-end agentic AI platform that turns a single company ID into **25+ bank-ready reports** (Forensic Audit, CMA, TEV, AML/Sanction Screening, Valuations), replacing a multi-week credit-check process with one that takes **minutes**.
- Paired an AI copilot (**Vedant**) with a multi-company chat mode, giving analysts source-cited answers across an entire group of related companies in one session.
- Combined **TEV Studio's** chat-driven section editing with a **Debt Syndication** workflow, shrinking report turnaround from **~20 days to a few hours**.
- ~35% lower LLM token usage, running on **AWS** behind a CI/CD pipeline (Bitbucket Pipelines) that auto-ships every merge to production.

2. Mess Management Portal | *MERN Stack*

- Launched a smart web and mobile app used by **100+ hostel residents**, improving meal planning and reducing food wastage by **30%** in 2 months.
- Created an admin dashboard to track meal participation and monitor wastage, enabling hostel staff to cut waste by **25% weekly**.
- Boosted admin efficiency by **40%** through a dedicated dashboard for food tracking and waste monitoring.

3. E-Commerce Website | *HTML, CSS, JavaScript, MongoDB*

- Developed a full-stack e-commerce platform with product listing, filtering, cart, and payment gateway (Stripe / Paytm) integration.
- Implemented a dynamic admin panel to manage **50+ products**, enabling seamless add / edit / delete functionality with MongoDB backend.
- Achieved **90% faster content updates** using real-time data sync and improved load times with performance optimisations.
- Added a secure checkout process and responsive UI, increasing usability across devices.

4. Personal Portfolio | *React.js, Next.js*

- Crafted a modern portfolio showcasing **10+ projects**, skills, and achievements.
- Added dark mode toggle, smooth navigation, and contact form with email integration.
- Admin panel enables real-time updates of projects and skills, improving content management efficiency by **70%**.

ACHIEVEMENTS

- Represented Scoreme Solutions at **Global Fintech Fest (GFF) 2026**, showcasing the agentic credit-intelligence platform to banking and fintech industry leaders.
- Led the public launch of the platform as **scoreme.ai**, taking it from an internal tool to a live, client-facing commercial product.
